

Build a Town from Scratch

Cambridge Assessment
International Education
Cambridge International School

Choose Your Site

Coastline

Steep Mountain

Riverbank

Desert

Activity

Imagine - If you were stranded with 50 families, where would you build your village and why?

Your Mission

-  Work in **groups of 4**
-  You have **5 minutes** to discuss.
-  Decide **where you would build your village**.
-  Be ready to explain **why you chose that location**.
-  Use the **A4/A3 sheet** to draw your community.

Activity

Imagine - If you were stranded with 50 families, where would you build your village and why?

Think About

-  Where will people get **water**?
-  Where will they find **shelter**?
-  How will they get **food and resources**?
-  How will they stay **safe**?

Settlement Functions

What Makes a Good Settlement?

A **settlement** is a place where people live and work. A successful settlement needs four important things:

Water

- Drinking
- Cooking
- Farming

Shelter

- Homes to live in
- Protection from weather

Safety

- Protection from floods, landslides, and danger
- A secure place for families

Resources

- Food
- Building materials
- Land for farming
- Natural resources

Think: *Which of the four locations provides these needs best?*

Site vs Settlement

SITE	SETTLEMENT
Definition: The physical location where a settlement is built.	Definition: A place where people live and build homes and communities.
Examples: Riverbank, coastline, mountain, desert.	Examples: Village, town, city.

Reflection

How does the site influence where people choose to build a settlement?

ATL in Focus:

Information Literacy Skills

- **Finding, interpreting, judging, and creating information:**
 - **Collect and analyse data to identify solutions and make informed decisions** (*extracting landscape features from image prompts to choose a viable site for 50 families*).
 - **Make connections between various sources of information** (*linking visual landscape data with core settlement functions like water, shelter, safety, and resources*).

Critical Thinking Skills

- **Analysing and evaluating issues and ideas:**
 - **Practise observing carefully in order to recognise problems** (*identifying geographic risks like mountain slope hazards, desert water scarcity, or coastal storms*).
 - **Gather and organize relevant information to formulate an argument** (*building a logical case for why their chosen site is best for survival*).

Thank you
