

MYP 1 Individuals and Societies : Term 1 Revision Paper

Based on: IB MYP Term End 1 Examination format · **Units:** Global Citizenship (Unit 1) and Where Do We Live? (Unit 2)

Maximum mark: 50 · **Suggested time:** 1 hour 30 minutes · **Criteria:** A (Knowing and Understanding), B (Investigating), C (Communicating), D (Thinking Critically)

Student name: _____ Class & Section: _____ Date: _____

Instructions to the student

1. Task 1: Criterion A, Knowing and Understanding [10 marks]
2. Task 2: Criterion B, Investigating [12 marks]
3. Task 3: Criteria A, C and D [18 marks: A:4, C:10, D:4]
4. Task 4: Criterion D, Thinking Critically [8 marks]
5. Answer all questions. Use a blue or black pen.
6. Read each command term carefully: *identify, state, describe, explain, evaluate, analyse*.

SECTION A (10 marks)

Task 1: Study Source A and Source B, then answer questions 1.1 to 1.6. Some questions ask you to use the sources; others ask you to use what you already know from class.

Source A: Plastic waste in a coastal city

Facts: The city produces about 900 tonnes of plastic waste each year. Only 1 in 5 plastic items is recycled.

Source B: Types of settlement

Settlement type	Typical population	Typical services
Hamlet	Fewer than 100 people	Few or none
Village	100 – 3,000 people	Small shop, primary school
Town	3,000 – 50,000 people	Market, secondary school, clinic
City	50,000 – 1 million people	Hospitals, universities, airports
Megacity	Over 10 million people	All major services and large transport networks

1.1 Using Source A, **identify two** causes of plastic pollution in the city. [2]

1.2 Using Source A, **state one** possible long-term effect of continued plastic pollution. [2]

1.3 State one action that you could take as a "global citizen" to reduce plastic waste. [2]

1.4 Using Source B and your prior knowledge, **describe** the difference between a *town* and a *megacity*, referring to population size and at least one other feature. [4]

SECTION B (12 marks)

Task 2: As an MYP 1 student you are going to carry out a short investigation on **Global Citizenship and Settlements**. Your investigation will explore *how people's choices can harm our cities and environment, and how taking action as global citizens can help build sustainable communities*.

Your teacher has drafted two possible research questions. You must choose **one** and give reasons for your choice.

2.1 Choose **one** research question. Circle or tick your choice. [1]

- **Option 1:** What problems do people face when they live in a crowded city?
- **Option 2:** How can young people help reduce waste in their local community?

2.2 Explain why you chose this question over the other option. [3]

2.3a For your chosen question, **state one** possible **primary source** you could use. [1]

2.3b For your chosen question, **state one** possible **secondary source** you could use. [1]

2.4 State one challenge you might face while carrying out this investigation. [1]

2.5 Read the student's research action plan below.

My Research Action Plan

1. I will ask three neighbours what they think about the topic.
2. I will use the first website I find and copy down two facts.
3. I will make a poster of what I found.
4. I will show my poster to the class on Monday.
5. I will not note which website I used.
6. I will do all my research in one evening.

Evaluate this action plan. In your answer:

- State **two strengths** of the plan. [2]
- State **two weaknesses** of the plan. [2]
- State **one improvement** and briefly explain why it would make the investigation better. [1]

SECTION C (18 marks)

Task 3: This task is marked using three criteria together: your knowledge (Criterion A), how clearly and appropriately you communicate (Criterion C), and how well you think critically (Criterion D). **[A:4, C:10, D:4]**

3.1 You have investigated a problem faced by your city (for example traffic, air pollution, waste, water shortage or flooding) and thought of a solution. Write a **letter to the mayor** persuading them to take action on **sustainable city planning** to address the problem.

Your letter should:

- use a suitable letter format (address, date, greeting, closing)
- name the problem and explain who or what it affects
- suggest a clear solution and explain how it would help the city
- use persuasive language and give reasons
- link your ideas to being a global citizen

SECTION D (8 marks)

Task 4: Read Source C before answering questions 4.1 to 5.2. You may use the source together with your prior knowledge.

Source C: Giving Nadipur's Lake a Second Life

A fictional article, written for practice.

For years, Nadipur Lake was a dumping ground. Plastic bags floated near the banks, sewage flowed in from nearby colonies, and few people visited. Now the Nadipur Lake Revival Project, run by the city municipal corporation, is changing that. Engineers are building small treatment plants at the drain outlets so that dirty water is cleaned before it reaches the lake. Workers are also removing waste and planting native trees and reeds around the edges to give birds, fish and insects a home.

The project also helps people get around. A 6-kilometre cycle track and walking path now runs around the lake and connects to the nearest metro station and two bus stops. Officials hope that families will

cycle or walk to the lake instead of driving, which would reduce traffic and air pollution. Solar lights along the path will keep it safe in the evening.

To pay for the project, the city plans to bring water from a distant reservoir during dry months to keep the lake full. Some residents worry this could leave less water for villages near the reservoir. The corporation says it will hold public meetings to hear everyone's views.

Source: *Nadipur Municipal Corporation newsletter, Issue 14*. Published for residents of the city.

4.1 Describe how the project plans to bring nature back to the lake while also making it easier for people to travel around the city. [4]

4.2 State one good impact of bringing water from a distant reservoir to the lake. [1]

4.3 State one possible bad impact of bringing water from a distant reservoir to the lake. [1]

5. Analyse the origin and purpose of Source C.

5.1 State the origin of Source C. [1]

5.2 State the purpose of Source C. [1]
