

interval: An interval is a group or range of values used to organize data.

It shows between which two values the data lies.

Example: If students' heights are grouped as

- 120–129 cm, 130–139 cm, 140–149 cm each group is called an interval.

Frequency: Frequency is the number of times a value or an interval appears in a data set.

It tells us how many observations are in each group.

Example: If 8 students have heights between 130–139 cm, then the frequency of the interval 130–139 cm is 8.

What is a Tally Chart?

A tally chart is a simple way to record and organize data using tally marks. It helps us count, compare, and interpret information easily.

Tally marks are usually grouped in sets of five:

- Four vertical lines: ||||
- The fifth line crosses them: ||||/

Following are the marks obtained by 72 students in Geography. Arrange these marks in a table using tally marks.

7	7	9	9	7	6	5	3	4	9	4	2
7	2	5	8	6	8	2	2	6	6	6	5
3	6	3	9	6	6	7	7	4	7	2	6
9	8	8	9	5	8	3	8	8	2	9	8
5	8	9	7	6	5	6	5	6	2	7	7
9	3	4	2	7	2	6	5	6	2	3	9

Class Interval	Tally Marks

- (a) students obtained more than 6 marks.
- (b) students obtained marks equal to or below 2.
