1. Types of Data

1. Is the data about favourite sport qualitative or quantitative data? Justify your answer in one sentence.

Answer:

2. This data was collected by directly asking each student. Is this primary or secondary data? Explain what this means in one sentence.

Answer:

2. Frequency Table

Use the raw data above to complete the tally and frequency columns below.

Sport	Tally	Frequency
Cricket		
Football		
Badminton		
Swimming		

1. Which sport was the most popular?

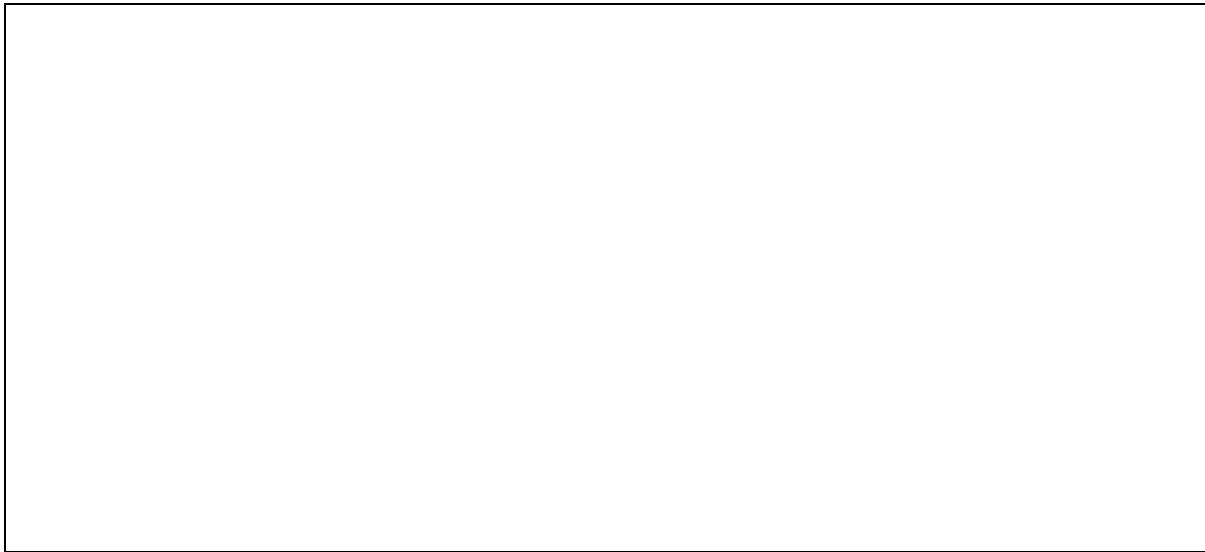

Answer:

2. Which sport was the least popular?

Answer:

3. Bar Graph

Use your frequency table to draw a bar graph below. Remember: bars should NOT touch, and both axes must be labelled. Give your graph a title.

4. Probability

A student is chosen at random from the 20 students surveyed.

1. Find the probability that the student's favourite sport is Cricket.

Working:

2. Find the probability that the student's favourite sport is NOT Football.

Working:

3. Find the probability that the student's favourite sport is Badminton or Swimming.

Working:

4. Is it more likely that a student prefers Cricket or Badminton? Use your frequency table to explain your answer.

Answer:
