

Kautuka is an **Innovation and Ideation Challenge** where you become a **young scientist, inventor, designer, and problem-solver**.

Instead of simply learning from books, you will:

Observe problems around you

Think of creative solutions

Design and create a model or prototype

Test your idea

Present your innovation to others

What do I have to do?

- **Step 1: Choose a Theme**

You can choose a problem related to:

-  Agriculture & Food Security
-  Community Health & Medical Technology
-  Simple Machines in Everyday Life
-  Future of Space Science
-  Clean Energy & Environmental Protection
-  Sustainable Living & Smart Resource Use
-  Defence Innovation Challenge
-  AI, Robotics & Automation
-  Indigenous Knowledge & Science
-  Assistive Devices for Differently Abled Individuals

Examples

Theme: Agriculture & Food Security

- **Problem: Plants are not watered regularly.**
- **Idea: Automatic plant watering system.**

Theme: Community Health

- **Problem: People forget to take medicines.**
- **Idea: Smart medicine reminder box.**

Theme: Simple Machines

- **Problem: Lifting heavy objects is difficult.**
- **Idea: Pulley-based lifting device.**

Theme: Clean Energy

- **Problem: Electricity wastage.**
- **Idea: Solar-powered study lamp.**

Theme: Assistive Devices

- **Problem: Visually impaired people face difficulty walking independently.**
- **Idea: Smart obstacle detector stick.**

What Should You Remember?

Don't start with "I want to make a volcano model."

Start with "What problem am I trying to solve?"

Then ask:

- 1. What is the problem?**
- 2. Who is affected?**
- 3. Why is it important?**
- 4. What solution can I create?**

What are judges looking for?

Originality – Is it a new idea?

Creativity – Is it interesting and well-designed?

Scientific understanding – Can you explain the science?

Practical use – Can it help solve a real problem?

Sustainability – Is it eco-friendly?

Teamwork – Did you work well together?

"Kautuka is not about making the biggest model. It is about finding a real problem, thinking creatively, and designing a solution that can make life better." 🚀💡
