

Factors & Multiples:

Factors

"Factors" are the numbers we can **multiply together** to get another number:

$$\begin{array}{ccc} 2 & \times & 3 = 6 \\ \nearrow & & \nearrow \\ \text{Factor} & & \text{Factor} \end{array}$$

2 and 3 are factors of 6

A number can have **many** factors.

Multiples

A multiple is the result of **multiplying** a number **by an** integer (not a fraction).

Example: Multiples of 3 are

..., -9, -6, -3, 0, 3, 6, 9, ...

Example: 15 **is** a multiple of 3, as $3 \times 5 = 15$

Example: 16 is **not** a multiple of 3
