

Students Name:	Grade: 6	Date:(29-06-2026)
Subject: Mathematics	Unit Title: Numerical Reasoning	
Task: Fraction, Decimal & Percentage Activity		Task Duration:

Topic: Relationship Between Fractions, Decimals and Percentages

Instructions

- Use A3 chart paper.
- Complete the task individually.
- Use colours, drawings, labels and mathematical vocabulary.
- Submit the chart on Monday (29-06-2026)

Part A: Conversion Table: Create a table showing at least 10 examples of fractions, decimals and percentages. Example: $\frac{1}{2} = 0.5 = 50\%$

Part B Real-Life Connections: Draw or paste 5 real-life examples showing fractions, decimals and percentages. For each example write the fraction, decimal and percentage representation. Examples: Pizza slices, chocolate bar, shopping discounts, attendance, test scores, sports statistics.

Part C Creative Visual: Draw one large visual (pizza, chocolate bar, hundred grid or pie chart). Shade part of the visual and label it using a fraction, decimal and percentage.

Inquiry Question "Why do we need fractions, decimals and percentages if they can all represent the same value?" Answer in 3–5 sentences.

Command Terms Identify – Recognize and name mathematical representations.

Convert – Change a fraction into a decimal or percentage and vice versa.

Represent – Show a value using diagrams, models or symbols.

Explain – Give reasons using mathematical language.

Compare – Discuss similarities and differences between representations.
