

Students Name:	Grade: 6	Date:
Subject: Mathematics	Unit Title: Numerical Reasoning	
Task: Integer worksheet		Task Duration:

Task : Use the below table to answer the Questions.

State	California	Georgia	Louisiana	New Mexico	Texas
Lowest Elevation (ft)	−282	0	−8	2,842	0
Highest Elevation (ft)	14,494	4,784	535	13,161	8,749

- Find the difference between the highest elevation in Georgia and the lowest elevation in California?
- What would the combined heights be for the lowest elevation in New Mexico and height elevation in Texas?
- What is the difference between the lowest elevations in Texas and Louisiana?
- A climber travels from Louisiana's lowest elevation to California's lowest elevation. What is the change in elevation?
- A pilot flies from New Mexico's highest elevation to Texas's highest elevation. What is the difference in elevations?
- Which pair of states has the greatest difference between their lowest elevations? Explain your reasoning.
- Create your own integer word problem using any three elevations from the table and solve it.
- Arrange these elevations from least to greatest:
